EXHIBIT 27

From: nchandik@cisco.com (Nagarani Chandika) Review: New CLIs for IGMP snooping Thu, 27 Feb 2003 17:56:47 +0000 (UTC) Received(Date): hi All, I am planning to introduce the following two new options for the already existing 'show ip igmp snooping' CLI. Please let me know your comments. OLD ==== Switch#show ip igmp snooping? show ip igmp snooping? mrouter Show routers on Catalyst Vlans Snooping info in a Catalyst Vlan Output modifiers <cr> **NEW** === Switch#show ip jamp snooping? show ip igmp snooping? mrouter Show multicast router port information vlan Show IGMP snooping information group Show IGMP snooping membership information <===== querier Show IGMP snooping querier information <===== Output modifiers <cr> The complete syntax of the CLI is as follows: show ip igmp snooping querier [vlan <vlan num>] show ip igmp snooping group [vlan <vlan_num>] Note: I modified the description for other options. I am wondering if that is ok. I am not sure if Catalyst Vlans is the right description. Please comment. Switch>show ip igmp snooping guerier Vlan IP Address IGMP Version Port Fa2/1 10.1.1.1 v3 13.1.1.1 v2Fa2/2 Switch>show ip igmp snooping group vlan 1 Vlan Group Version Filter mode Port set 229.2.3.4 v3 include fa2/1,fa2/3 224.1.1.1 v2 exclude fa6/2 Switch> For future extension purposes, I am thinking the group command can be extended to display some detailed information for a specific group such as #include hosts, #exclude hosts, last reporter,
